1. Types of paper

Contributions falling into the following categories will be considered for publication: Original research Paper, Reviews, and discussions. Please ensure that you select the appropriate article type from the list of options when making your submission. Authors contributing to special issues should ensure that they select the special issue article type from the list.

2. Manuscript submission

Legal requirements

Submission of a manuscript implies: that the work described has not been published before; that it is not under consideration for publication anywhere else; that its publication has been approved by all co-authors, if any, as well as by the responsible authorities—tacitly or explicitly—at the institute where the work has been carried out. The publisher will not be held legally responsible should there be any claims for compensation.

Permissions

Authors wishing to include figures, tables, or text passages that have already been published elsewhere (including in the authors’ own previous papers) are required to obtain permission from the copyright owner(s) and to state clearly in the figure/table caption or other appropriate locations in the manuscript that such permission has been obtained. Any material received without such statements will be assumed to originate from the author(s).

Online submission

The journal accepts submissions electronically via an online manuscript submission. Please go to the link https://www.editorialmanager.com/jprt/default.aspx to submit your manuscript online. To expedite the review process, authors are requested to provide a list of potential reviewers. Microsoft Word files can be uploaded for peer review, and original, high-quality figures are required.

3. Manuscript preparation

Language

The manuscript should be written in English. Either British English or American English spelling and terminology may be used, but the system chosen should be followed consistently throughout the manuscript. It should have been carefully checked for clarity, conciseness, correctness of grammar, and typographical errors.
**Length of manuscripts**

There are four submission types: original article, review article, short communication, and letter to editor. There are no strict limits on the number of published pages for both original articles and review articles. Nevertheless, authors are asked to make the manuscripts as concise as possible and to limit them to less than 40 manuscript pages.

**Text formatting**

Manuscripts must be typewritten with a font size of 12pt, double-spaced with wide margins (2cm) on each side of letter sized or A-4 sized white paper, and one column. We accept Microsoft Word 2007 (or higher version) or doc format (older Word version). The manuscript should contain the following in this order: Title, Abstract with Keywords, Main Text, Acknowledgements (optional), Appendix (optional), References, Tables, and Figures. Do not import the Tables or Figures into the text. The Editors reserve the right to adjust style to certain standards of uniformity. Use the automatic page numbering function to number the pages. Do not use field functions. Use tab stops or other commands for indents, not the space bar. Use the table function, not spreadsheets, to make tables. Use the equation editor or MathType for equations. Note: If you use Word 2007, do not create the equations with the default equation editor but use MathType instead.

**Title page.** Centered title should be concise and informative, followed by name(s) of the author(s), affiliation(s), address(es), country. Identify the author(s) with e-mail address(es), If available, the 16-digit ORCID of the author(s).

**Abstract.** A concise and factual abstract not exceeding 250 words must be provided with each manuscript. The abstract should state briefly the purpose of the research, the principal results, and major conclusions. No footnotes, references, figures, or tables may appear in the abstract.

**Keywords.** Immediately after the abstract, provide keywords (4-6 keywords). The keywords (or key phrases) should be as independent as possible, and jointly reflect the main topic of the paper.

**Heading/Section levels (numbered).** For regular research papers and review articles, please use the decimal system of headings. Please divide your manuscript into clearly defined and numbered sections and subsections. Sections should be numbered 1, 2, etc. (The abstract is not included in section numbering). Subsections should be numbered 1.1 (then 1.1.1, 1.1.2 …), 1.2, etc. Use this numbering also for internal cross-referencing: do not just refer to “the text”. Each section and subsection should be given a brief heading and each heading should appear on its own separate line. For short papers, no section levels are needed.

**Footnotes.** Essential footnotes to the text should be numbered consecutively and placed at the bottom of the page to which they refer. Footnotes to the table should be indicated by superscript lower-case letters (or asterisks) and placed immediately below the table.

**Formulae and symbols.** Formulae, symbols, and all subscripts, superscripts, Greek letters, and other characters must be legible and carefully checked. Standard mathematical notation should be used. All symbols used in manuscript must be explained.

**Equations.** Mathematical expressions should be consecutively numbered throughout the body of the paper at the right-hand margin in parentheses. Numbering consecutively any equations that have to be displayed separately from the text (if referred to explicitly in the text), and referring the equation with , i.e. Eq.(1), Eq. (2), Eqs.(3, 4)…, in the text. For the simple formulae which appear in the line of normal text, please use solidus (/) instead of a horizontal line for small fractional terms, e.g., \( x/y \). Powers of e are often more conveniently denoted by “exp”. In principle, variables should be presented in italics.

**Figures.** Illustrations, whether line drawings (plots or laser prints) or photographs are called figures and are grouped together sequentially (in the order they are referred to in the text). Use large lettering and heavy line weights in line drawings so that they will be clear and sharp after reduction. All digital arts, including micrographs, line arts, and
grayscale images, included in the manuscript should be supplied in a separate electronic file in TIFF, EPS, or JPEG format with a preferred resolution of 600dpi relative to the final figure size. Poor quality drawings will be returned for redrafting. Submit good photographs (in focus and about 10% lighter than normal) in black-and-white or color (DO NOT SUBMIT SLIDES). Figures should be placed after the tables, numbered consecutively in the order to which they are referred, and given a descriptive caption. All figures should be numbered using Arabic numerals (figure parts should be denoted by lowercase letters) and should always be cited in text, such as Fig. 1, Fig. 2, in consecutive numerical order.

Tables. Tables should be placed after the references, with each table placed on a separate page, numbered consecutively in the order to which they are referred, and given a suitable caption. No vertical rules should be used. Tables should not duplicate results presented elsewhere in the manuscript (e.g., in graphs). All tables should be numbered using Arabic numerals and supplied with a table title which explains clearly and concisely the components of the table. Tables should not duplicate results presented elsewhere in the manuscript (for example, in figures). Tables should always be cited in the text, such as Table 1, Table 2, in consecutive numerical order.

Units. The SI units should be followed for all dimensional quantities.

Abbreviations. Abbreviations should be used only if deemed absolutely necessary, and should be defined at first mention in the abstract and again in the main body of the text and used consistently thereafter.

Acknowledgements. Acknowledgements of people, grants, funds, etc., should be placed in a separate section before the References section. The name of funding organizations should be written in full. Do not include acknowledgements on the title page, as a footnote to the title or otherwise.

Citation in text. Reference citations in the text should be identified by numbers in square brackets. Some examples:
1. Negotiation research spans many disciplines [3].
2. This result was later contradicted by Becker and Seligman [5].
3. This effect has been widely studied [1-3, 7].

Reference list. The list of references should only include works that are cited in the text and that have been published or accepted for publication. Personal communications and unpublished works should only be mentioned in the text. Do not use footnotes or endnotes as a substitute for a reference list. The entries in the list should be numbered consecutively.

- Journal article

- Article by DOI

- Report

- Book

- Book chapter

- Online document

Always use the standard abbreviation of a journal’s name according to the ISSN List of Title Word Abbreviations, see http://www.issn.org/services/online-services/access-to-the-ltwa/. If you are unsure, please use the full journal title.

4. After acceptance

Proof reading

The purpose of the proof is to check for typesetting errors and the completeness and accuracy of the text, tables, and figures. Substantial changes in content, e.g., new results, corrected values, title and authorship, are not allowed without the approval of the Editor-in-Chief. After online publication, further changes can only be made in the form of an Erratum, which will be hyperlinked to the article.

Online first

The article will be published online after receipt of the corrected proofs. This is the official first publication citable with the DOI. After release of the printed version, the paper can also be cited by issue and page numbers.

Copyright transfer

Authors will be asked to transfer copyright of the article to the Publisher (or grant the Publisher exclusive publication and dissemination rights). This will ensure the widest possible protection and dissemination of information under copyright laws.

Licenses for Open Choice resp. SpringerOpen

Open Choice. Open Choice allows you to publish open access in more than 1850 Springer Nature journals, making your research more visible and accessible immediately on publication.

Benefits:

- Increased researcher engagement: Open Choice enables access by anyone with an internet connection, immediately on publication.
- Higher visibility and impact: In Springer hybrid journals, OA articles are accessed 4 times more often on average, and cited 1.7 more times on average*.
- Easy compliance with funder and institutional mandates: Many funders require open access publishing, and some take compliance into account when assessing future grant applications.

It is easy to find funding to support open access – please see our funding and support pages for more information.

*) Within the first three years of publication. Springer Nature hybrid journal OA impact analysis, 2018.

Research Data policy. A submission to the journal implies that materials described in the manuscript, including all relevant raw data, will be freely available to any researcher wishing to use them for non-commercial purposes, without breaching participant confidentiality. The journal strongly encourages that all datasets on which the conclusions of the
paper rely should be available to readers. We encourage authors to ensure that their datasets are either deposited in publicly available repositories (where available and appropriate) or presented in the main manuscript or additional supporting files whenever possible. Please see Springer Nature’s information on recommended repositories. External Link http://www.springernature.com/gp/group/data-policy/repositories

Data availability. The journal encourages authors to provide a statement of Data availability in their article. Data availability statements should include information on where data supporting the results reported in the article can be found, including, where applicable, hyperlinks to publicly archived datasets analyzed or generated during the study. Data availability statements can also indicate whether data are available on request from the authors and where no data are available, if appropriate. Data Availability statements can take one of the following forms (or a combination of more than one if required for multiple datasets):

1. The datasets generated during and/or analysed during the current study are available in the [NAME] repository, [PERSISTENT WEB LINK TO DATASETS].
2. The datasets generated during and/or analyzed during the current study are not publicly available due [REASON WHY DATA ARE NOT PUBLIC] but are available from the corresponding author on reasonable request.
3. The datasets generated during and/or analyzed during the current study are available from the corresponding author on reasonable request.
4. Data sharing not applicable to this article as no datasets were generated or analyzed during the current study
5. All data generated or analyzed during this study are included in this published article [and its supplementary information files].

More examples of template data availability statements, which include examples of openly available and restricted access datasets, are available:

Data availability statements. Springer Nature provides a research data policy support service for authors and editors, which can be contacted at researchdata@springernature.com. This service provides advice on research data policy compliance and on finding research data repositories. It is independent of journal, book and conference proceedings editorial offices and does not advise on specific manuscripts. 5. Ethical responsibilities of authors

This journal is committed to upholding the integrity of the scientific record. As a member of the Committee on Publication Ethics (COPE), the journal will follow the COPE guidelines on how to deal with potential acts of misconduct.

Authors should refrain from misrepresenting research results which could damage the trust in the journal, the professionalism of scientific authorship, and ultimately the entire scientific endeavor. Maintaining integrity of the research and its presentation can be achieved by following the rules of good scientific practice, which include:

(i) The manuscript has not been submitted to more than one journal for simultaneous consideration.
(ii) The manuscript has not been published previously (partly or in full), unless the new work concerns an expansion of previous work (please provide transparency on the re-use of material to avoid the hint of text-recycling (self-plagiarism)).
(iii) A single study is not split up into several parts to increase the quantity of submissions and submitted to various journals or to one journal over time.
(iv) No data have been fabricated or manipulated (including images) to support your conclusions
(v) No data, text, or theories by others are presented as if they were the author’s own (plagiarism). Proper acknowledgements to other works must be given (this includes material that is closely copied (near verbatim), summarized and/or paraphrased), quotation marks are used for verbatim copying of material, and permissions
are secured for material that is copyrighted. **Important note: the journal may use software to screen the manuscripts for plagiarism.**

(vi) Consent to submit has been received explicitly from all co-authors, as well as from the responsible authorities—tacitly or explicitly—at the institute/organization where the work has been carried out, before the work is submitted.

(vii) Authors whose names appear on the submission have contributed sufficiently to the scientific work and therefore share collective responsibility and accountability for the results.

6. **Author support**

**English Language Support**

For editors and reviewers to accurately assess the work presented in your manuscript you need to ensure the English language is of sufficient quality to be understood. If you need help with writing in English, you should consider:

- Asking a colleague who is a native English speaker to review your manuscript for clarity.
- Visiting the English language tutorial which covers the common mistakes when writing in English.
- Using a professional language editing service where editors will improve the English to ensure that your meaning is clear and identify problems that require your review. Two such services are provided by our affiliates Nature Research

** Editing Service and American Journal Experts.**

*English language tutorial* [http://www.springer.com/gp/authors-editors/authorandviewertutorials/writinginenglish](http://www.springer.com/gp/authors-editors/authorandviewertutorials/writinginenglish)

*Nature Research Editing Service* [https://secure.authorservices.springernature.com/c/10springer/](https://secure.authorservices.springernature.com/c/10springer/)

Please note that the use of a language editing service is not a requirement for publication in this journal and does not imply or guarantee that the article will be selected for peer review or accepted. If your manuscript is accepted, it will be checked by our copyeditors for spelling and formal style before publication.
